

Advanced analytics for powerful insights

Organizations often use several tools to run their infrastructure and business. However, the problem with using multiple tools is that all the data they create is stored in independent silos, thwarting actionable insights into organizational performance.

ManageEngine Analytics Plus is an advanced analytics solution that correlates data islands to instantly provide insights in the form of rich visuals and interactive dashboards.

Fast installation and setup

Install, configure, and create visualizations from scratch in Analytics Plus in just a few minutes. Analytics Plus has a built-in, intuitive, drag-and-drop report builder to help you create dashboards easily.

Unified insights from various data sources

Analytics Plus analyzes data from a variety of sources, including spreadsheets, files and feeds, relational and non-relational databases, applications, and APIs, providing a unified view of your entire IT.

Out-of-the-box IT analytics

Analytics Plus offers easy integration with other ManageEngine tools like ServiceDesk Plus, ServiceDesk Plus MSP, SupportCenter Plus, Application Manager, and OpManager. Access your Analytics Plus dashboards from within ServiceDesk Plus without having to switch between applications.

Ask questions, and get insights

Analytics Plus packs in the capabilities of Artificial Intelligence, Machine Learning, and Natural Language Processing in Zia, its intelligent analytics assistant, so you don't have to spend time creating reports. Just ask questions and Zia responds with powerful visualizations facilitating faster data analysis.

Forecast future trends

Analytics Plus features a robust forecasting engine that predicts future data trends that enables you to analyze past data and forecast future data trends with ease.

Powerful data blending and automated analysis

Analytics Plus intelligently reads imported data and automatically runs correlation logic to generate dashboards instantly.

With features such as cross-data analytics and advanced data modeling with Lookup Columns, Analytics Plus merges different data sets using common fields. It also has pre-built analytical functions and a formula engine similar to Microsoft Excel with an extensive library of mathematical and statistical functions.

Rich visual analysis for accurate decision making

Create reports and dashboards including charts, widgets, KPI metrics, pivot tables, and tabular view components. Visually slice and dice data, drill down into details, and change the appearance using different chart types and predefined templates.

Secure sharing

With Analytics Plus, you can securely share reports and dashboards with others, and embed dashboards in websites, intranets, and other web apps for wider access with fine-grained control. You can also hand-pick reports and organize them into a slideshow or create web embeds for publishing to select audience.

Real-time collaboration

Why wait for monthly review meetings to discuss your views when you can tag users, ask questions, and get responses in real time? Analytics Plus' report commenting facilitates healthy discussions and knowledge sharing on key metrics with report commenting.

Stay connected with data

With Analytics Plus, you can receive automated alerts whenever there is a change in your metrics. For example, when SLA compliance dips below 95% or the number of backlogs exceed 100. These alerts are sent via in-app notifications and e-mails.

On-the-go analytics

Analytics Plus is also available as a mobile app for Android and iOS tablets. Now you can access your reports and dashboards on the move.

Lower total cost of ownership (TCO)

Analytics Plus can save organizations up to 50 percent of their TCO compared to leading IT analytics tools offering similar functionalities.

About Analytics Plus

Analytics Plus is an IT analytics solution from ManageEngine. With a simple user interface and a powerful analytical and statistical engine, Analytics Plus offers actionable insights via rich visualizations and interactive dashboards for users to analyze large data volumes of IT data in minutes.
