

DSSI 
Information Technologies
Value Added Distributor

PORTFOLIO OF REPRESENTATIONS

2024

MOZAMBIQUE - ANGOLA - PORTUGAL - SPAIN - CAPE VERDE - BRAZIL

DSSI offers its business partners a wide range of products from various manufacturers, complemented whenever necessary by pre-sales, implementation and support services. Local intervention is guaranteed by our specialized technical team, certified by our technology partners and made up of professionals with extensive experience in the business market.

DSSI has been expanding its area of influence since it started operating in Portugal. It is currently present in 6 countries and 3 continents.

DSSI currently represents a group of world -leading IT infrastructure manufacturers in the following areas:

STORAGE, BACKUP,
ARCHIVING & SHARING

MONITORING AND
HELP DESK

NETWORKING

SAFETY AND
MOBILITY

CLOUD

CRASHPLAN

CrashPlan provides secure, scalable and straightforward data backup of endpoints. It helps organizations recover from any worst-case scenario, whether it's a disaster, human error, a stolen laptop, ransomware or an undiscovered calamity. It continues to innovate as the work landscape evolves, which makes CrashPlan fundamental to organizations' data security. What starts as endpoint backup and recovery becomes a solution for recovering from ransomware, migrations, and legal holds.

NAKIVO®

Designed to help with the virtualization process, Nakivo Backup & Replication is a fast, reliable and affordable data protection solution for VMware environments. The product is certified by VMware and has received the highest level of approval - VMware Ready status.

Nakivo Backup & Replication offers a complete data protection feature set for VMware virtualized environments, including local and off-site VM backup, replication, granular and instant recovery, network acceleration, global data replication, web user interface, AES-256 encryption, advanced reporting and Cloud support.

OwnCloud began with a keynote by Frank Karlitschek at Camp KDE'10, where he spoke about the need for a free, self-contained open source cloud. Two years later, he announced the start of OwnCloud Inc. OwnCloud is based on its own open source community and is a self-service file synchronization and application sharing platform. It allows you to access and synchronize your files, contacts, calendars and bookmarks across multiple devices.

This software is characterized by constant innovation due to its community, which supports much of the development of the open source version, and its in-house team of programmers who work to unite the needs of this community and its corporate clients.

OwnCloud offers three types of subscriptions, always annual for a minimum of 20 users:

- Standard
- Company
- Personalized

Email is one of today's most important communication tools, as well as one of a company's biggest and most important resources. With the huge growth of this information, a solution is needed that manages this information while guaranteeing user access at any time and from anywhere. The MailStore solution is an email archiving platform that, according to policies defined by the system administrator or by the users themselves, archives email to a location outside the email server or files. This archive can be accessed by your users via their email client, mobile device or browser.

QNAP (Quality Network Appliance Provider) Systems, Inc., a company founded in 2004. Since its inception, QNAP has aimed to provide professional NVR surveillance network video players and NAS storage for small/ medium businesses and enterprise segments. QNAP has focused not only on hardware design but also on a growing software engineering competence that focuses precisely on bringing to market products that offer the most secure performance scalability available, ease of installation and ease of use.

QNAP offers NAS in two different environments:

High-end SMB

- Racks - Towers

SMB

- Racks

Riverbed Technology is a digital performance company. Riverbed has a comprehensive set of solutions that enable organizations to improve their performance. These are:

- SteelHead - Physical and Virtual Appliances, for visibility, optimization and control of hybrid WANs from branch offices to Data Centers;
- SteelCentral - Integrated visibility and statistics solution for applications and users, for an in-depth perspective of performance analysis of the entire infrastructure;
- SteelFusion – for optimizing iSCSI connections, which extend the Data Center infrastructure to the branch offices;
- SteelConnect – SD-WAN network solution for Cloud-Centric structures.

SolarWinds was founded in 1999 with the aim of creating relevant solutions that make the work of IT professionals easier. The tools SolarWinds offers are designed to solve and simplify a wide range of IT management challenges, whether these problems are associated with servers, networks, applications, storage or virtualization.

Solutions available:

Network Performance - Effectively guarantee business-critical network services through a unified view of failures, performance, availability, traffic, configurations and more. SolarWinds is a network performance management software that allows you to monitor and manage your network infrastructure;

App & Systems - Management software that gives you instant visibility of all the resources that can affect the performance of your applications;

Database Performance – Performance problems are now easier to identify. SolarWinds Database Performance Analyzer monitors SQL Server, Oracle, Sybase and DB2 on both physical and virtual servers;

- Security & Compliance - Simplify the difficult task of maintaining, measuring and monitoring security compliance. SolarWinds Security Information & Event Management (SIEM) is designed to enable automation and strong situational awareness without the complexity of competing solutions.

AVTECH Software (AVTECH), a North American company founded in 1988, focuses on the development of software and hardware for monitoring environments, indicators such as temperature, humidity, energy, floods, water leaks, smoke, fire, air flow or even intrusions. The solutions marketed by AVTECH are:

- Room Alert - allows users to remotely manage Room Alert monitors. This powerful service allows access from a cell phone or any device connected to the Internet;
- Sensors - allows users to remotely manage Room Alert monitors. This powerful service allows access from a cell phone or any device connected to the Internet;

- Device ManageR – AVTECH's all -in-one solution for identifying, managing, monitoring, alerting, logging, reporting, automating actions and much more;
- Network Cameras – IP cameras for maximized flexibility and monitoring of environments in buildings where network and power access may be limited, Axis offers wired, wireless and PoE options, scalable to meet your monitoring and security needs. All cameras can be fully integrated with AVTECH's Device ManageR software.

Riverbed Technology is a digital performance company. Riverbed has a comprehensive set of solutions that enable organizations to improve their performance. These are:

- SteelHead - Physical and Virtual Appliances, for visibility, optimization and control of hybrid WANs from branch offices to Data Centers;
- SteelCentral - Integrated visibility and statistics solution for applications and users, for an in-depth perspective of performance analysis of the entire infrastructure;
- SteelFusion – for optimizing ISCSI connections, which extend the Data Center infrastructure to the branch offices;
- SteelConnect – SD-WAN network solution for Cloud-Centric structures.

From the very beginning, Peplink set out to make routers more reliable and easier to use. Since then, they have developed (SDWAN) routers and multi-WAN VPN connection access points with an intuitive web interface and industry-leading durability, and a wide range of features that are difficult to combine and find in a single solution. From home users, enterprise network companies, and even emergency vehicles, they help thousands of customers migrate from traditional WAN solutions to SDWAN, resulting in higher bandwidth, greater WAN reliability, and lower costs.

Ubiquiti Networks designs network communication platforms for everyone and everywhere. With more than 10 million devices deployed in over 180 countries, it develops high-performance network technology for service providers and businesses. Ubiquiti is transforming business and community subnets with its AirMax™, UniFi™, airFiber™, airVision™, MFI™ and EdgeMAX™ platforms, combining innovative technology with the support of a global user community to eliminate barriers to connectivity.

K7 Computing is one of the first and most successful IT security companies, protecting more than 25 million customers worldwide against threats to the IT environment. They are recognized as a leader in providing corporate security solutions and protecting home users as well as corporate users from various sectors. Their flagship products - K7 Total Security and K7 Enterprise Security - are being used to protect customers on almost every continent and within some of the world's most protected and defended organizations.

Titan HQ offers DNS filtering, email protection and archiving tools for companies and managed service providers. The various Titan HQ solutions protect your end users' emails and websites from malware and ransomware, phishing, spoofing and malicious websites.

SOPHOS

Sophos offers a broad portfolio of advanced products and services to protect users, networks and endpoints against ransomware, malware, exploits, phishing and all manner of cyber attacks. Sophos offers a unique integrated cloud-based management dashboard: Sophos Central, the centerpiece of the adaptive cybersecurity ecosystem that provides a centralized Data Lake that draws on a rich collection of open APIs available to customers, partners, developers and other cybersecurity vendors.

ManageEngine

As Zoho Corporation's IT management division, ManageEngine solutions enable you to take control of your IT, from security, networks and servers to applications, service desk, Active Directory, desktops and mobile devices. The feature-rich, easy-to-use and easy-to-integrate solutions provide you with a holistic IT management solution that accelerates digital transformation, enables remote working and protects your digital enterprise.

At Wasabi they specialize in storage. Cloud storage is all they do. They do it cheaper and faster. Over time they have come to realize that the biggest challenge companies face with their data is how to store it in an accessible, reliable and secure way. The data that defines your business today, and your success tomorrow, needs to be stored in a universal storage product that serves almost all your cloud storage needs.
