

DSSI 

REPRESENTATIONS PORTFOLIO

2026

Moçambique – Portugal – Espanha – Angola – Cabo Verde – Brasil

DSSI, Value Added Distributor, provides a wide range of products and solutions to their business partners, complementing if necessary with pre-sales, implementation and support services. Local intervention is guaranteed by our specialized and vendor certified technical department, this team includes professionals with solid experience in the IT market.

DSSI has been amplifying its area of influence, since it started its activity in Portugal. Nowadays is in **6 countries** and in **3 continents**.

Currently represents a set of vendors, which are the world's leading infrastructure IT companies:

- Storage, Backup, Archive & Sharing;
- Monitoring & Help Desk ;
- Networking;
- Security & Mobility;
- Cloud.

CrashPlan provides peace of mind through secure, scalable, and straightforward endpoint data backup. It helps organizations recover from any worst-case scenario, whether it is a disaster, simple human error, a stolen laptop, ransomware or an as-of-yet undiscovered calamity. It continues to innovate as the landscape of work evolves, which makes CrashPlan foundational to organizations' data security. What starts as endpoint backup and recovery becomes a solution for ransomware recovery, breaches, migrations, and legal holds.

Designed to aid in the virtualization process, **Nakivo** Backup & Replication is a fast, reliable and affordable data protection solution for VMware environments. The product is VMware certified and has received the highest level of approval - VMware Ready status.

Nakivo Backup & Replication offers a complete data protection capability defined for VMware virtualized environments, including local and off-site VM backup, replication, granular and instant recovery, network acceleration, global data replication, web user interface, AES-256 encryption, advanced reporting and Cloud support.

Email is one of the essential day-to-day tool in current communications, as is a crucial resource in every company. With the increase in relevance of this form of communication is necessary an application that makes the management of emails at the same time that guarantees user accessibility anytime anywhere.

The MailStore solution is an email archive platform that accordingly to the system administrator or user set policies archives emails outside the server or into email files. This archive can be accessed by the users though an email client, mobile devices or through a web browser.

QNAP (Quality Network Appliance Provider) Systems, Inc. a company founded in 2004. From the beginning, QNAP has aimed to offer network video players professional NVR video surveillance and NAS storage for small/medium businesses and enterprise segments.

QNAP has focused not only on hardware design but also on a growing competence in software engineering that is precisely focused on bringing to market products that offer the most secure performance available scalability, ease of installation and ease of use.

QNAP offers NAS in two distinct environments:

High-end SMB

- Racks
- Towers

SMB

- Racks

Kiteworks

Kiteworks is a platform specialized in secure file sharing, designed to facilitate the sending, processing and management of files, ensuring their integrity and confidentiality. Ideal for small, medium and large companies that deal with sensitive data. Kiteworks offers ease of use and high security standards:

- End-to-end encryption;
- Two-factor authentication;
- Private sharing and access control;
- Ideal for temporary sharing;
- Password protection;
- Logging;
- Complies with GDPR, HIPAA, CCPA and NIS2 standards.

ManageEngine

As the information technology management arm of Zoho Corporation, ManageEngine solutions empower you to take control of your IT, from security, networks, and servers to applications, service desk, Active Directory, desktops, and mobile devices.

The feature-rich solutions are easy to use and integrate, providing you with a holistic IT management solution that accelerates digital transformation, enables remote work, and secures your digital enterprise.

Riverbed Technology it is a performance IT Company. Riverbed has a wide range of IT infrastructure optimization solutions that allow organizations to obtain a substantial improvement in information access. These are:

- **SteelHead** – Appliances and Virtual Appliances, enable a robust Wan optimization in remotes sites and in data centers;
- **SteelCentral** – Integrated evaluation solution and determined network accelerations, that combines network visibility and a appliance with the optimizing advantages of the Steelhead;
- **SteelFusion** – for ISCSI connections optimization, that expands the virtual datacenter to the limit of the subsidiaries;
- **SteelConnect** – An SD-WAN networking solution for CloudCentric infraestrutures.

SolarWinds was founded in 1999 with the purpose of creating relevant solutions that make the work of IT professionals easier. The tools that SolarWinds offers are designed to solve and simplify a wide number of IT management challenges, whether these problems are associated with servers, networks, applications, storage or virtualization.

- **Network Performance** - Effectively ensure business critical network services through a unified view of failures, performance, availability, traffic, configurations among others. SolarWinds is a performance management software network that allows you to monitor and manage your network infrastructure;;

- **App & Systems** – Management software that gives you instant visibility into all resources that can affect the performance of your applications;

- **Database Performance** – Performance problems are now easier to identify. SolarWinds Database Performance Analyzer monitors SQL Server, Oracle, Sybase and DB2 on both physical and virtual servers;

- **Security & Compliance** - Simplify the difficult task of maintaining, measuring and monitoring security and compliance. SolarWinds Security Information & Event Management (SIEM) is designed to enable automation and a strong situational awareness without the complexity of competitive solutions.

AVTECH Software (AVTECH), is a North American corporation founded in 1988, is a computer hardware and software developer and manufacturer aimed for the facilities monitoring. The main conditions monitored are: temperature, humidity, power, flood / water leakage, smoke / fire, air flow, room entry, motion, cameras and more. AVTECH solutions::

- **Room Alert** - allows users to remotely manage Room Alert monitors. This powerful service allows access from any mobile or internet connected device;

- **Sensors** - The seven primary threats of facilities are: temperature, power, humidity, flood, smoke, air flow and room entry. AVTECH offers a variety of sensors and solutions to help you monitoring this indicators.

- **Device ManageR** – Device ManageR is AVTECH's all-in-one solution for the discovery, management, monitoring, alerting, logging, graphing, automatic action and more;

- **Network Cameras** - IP cameras for maximized flexibility and monitoring environments in buildings where network and power access may be limited, Axis offers wired, wireless and PoE options, scalable to meet your monitoring and security needs. All cameras can be fully integrated with AVTECH's Device ManageR software.

The Intelligent Solution for Traffic Management and High Availability

In today's digital world, where application availability and speed are crucial to the success of any organization, it is essential to ensure that network traffic is distributed efficiently and evenly across servers.

LoadMaster is a comprehensive Load Balancer solution that ensures the performance, security and continuity of your services with high availability. By integrating this solution into your infrastructure, you can improve the user experience, reduce the risk of failures and optimize operating costs.

Main Features and Benefits:

- Load Balancing;
- High Availability;
- Scalability and Elasticity;
- Compatibility with Cloud and On-Premise environments.

From the beginning, **Peplink** aimed to make routers more reliable and easy to use. Since then, they have developed (SDWAN) routers and multi-WAN VPN access points with an intuitive web interface and industry-leading durability, along with a wide range of features that are difficult to match and find in a single solution. From home users, enterprise networking companies, to even emergency vehicles, they help thousands of customers migrate from traditional WAN solutions to SDWAN, resulting in greater bandwidth, higher WAN reliability, and lower costs.

Ubiquiti Networks designs network communication platforms for everyone and everywhere. With over 10 million devices deployed in more than 180 countries, develops a high-performance network technology to service providers and enterprises.

Ubiquiti is transforming the sub-networks of enterprises and communities with their platforms, AirMax™, UniFi™, airFiber™, airVision™, MFI™ and EdgeMAX™, combining innovative technology with the support of a global community of users to eliminate barriers to connectivity.

K7 Computing are one of the earliest and most accomplished IT security companies protecting more than 25 million clients worldwide against threats to their IT environment. They are recognized as a leader in providing safe and secure computing experience for home users as well as enterprise users across various industries.

Their flagship products — K7 Total Security and K7 Enterprise Security—are being used to protect clients on almost every continent, and inside some of the most securely protected and defended organizations in the world.

Cyber Sentries offers tools as DNS filtering, email protection and archiving solutions for companies and managed service providers.

The diverse **Cyber Sentries** solutions protect your end users' emails and websites from malware and ransomware, phishing, spoofing and malicious websites.

Como repartição de gestão de tecnologias da informação da Zoho Corporation, as soluções **ManageEngine** permitem-lhe assumir o controlo das suas IT, desde a segurança, redes e servidores até às aplicações, service desk, Active Directory, computadores de secretária e dispositivos móveis.

As soluções ricas em funcionalidades, fáceis de utilizar e de integrar, proporcionando-lhe uma solução holística de gestão de IT que acelera a transformação digital, permite o trabalho remoto e protege a sua empresa digital.

A **Sophos** oferece um amplo portfólio de produtos e serviços avançados para proteger usuários, redes e endpoints contra ransomware, malware, exploit, phishing e toda a infinidade de ataques cibernéticos. A Sophos oferece um painel único de gerenciamento integrado baseado na cloud: o Sophos Central, a peça central do ecossistema de segurança cibernética adaptativa que fornece um Data Lake centralizado que se utiliza de um rico acervo de APIs abertas disponíveis para clientes, parceiros, desenvolvedores e outros fornecedores de cibersegurança.

Tenable is a global leader in vulnerability exposure management, helping organizations identify and mitigate security flaws that put business value, reputation, and trust at risk. Its AI-powered management platform provides centralized visibility across the entire attack surface, enabling a coordinated and effective response to threats.

With comprehensive coverage across IT infrastructures and cloud environments, Tenable enables organizations to proactively protect themselves against evolving cyberattacks.

By providing continuous visibility, risk context, and prioritization capabilities, the platform helps significantly reduce cyber risk.

Cyberhaven is a platform specialized in Insider Risk and Data Loss Prevention, DLP, which protects sensitive information from the inside out of the corporate environment. The main objective is to prevent data theft in real time, monitoring, controlling and protecting confidential data.

Cyberhaven stands out for its innovative approach based on persistent data tracking, ensuring visibility and total control over the information being processed in its environment.

With Cyberhaven, organizations can protect their data in the cloud environment. Ensuring that critical information or unexpected actions do not occur.

At Wasabi they are storage specialists. Cloud storage is all they do.

They do it less expensively and faster. Over time they have realized that the biggest challenge companies face with their data is how to store it in an accessible, reliable and secure way.

The data that defines your business today, and your success tomorrow, needs to be stored in a universal storage product that serves almost all of your cloud storage needs.
