

Endpoint Management (Updates, Inventory)

ManageEngine

ManageEngine is a provider of endpoint management solutions.

As the IT infrastructure expands and resources such as laptops and desktops become available to users, and as servers—which are essential for the operation of IT infrastructure—are deployed, organizations face a number of challenges related to the management, control, and security of these systems.

ManageEngine Central Endpoint is a tool designed to address these challenges.

CHALLENGE

Ensure that computers provided to end users comply with the organization's internal policies.

- ✓ Ensure that the installed operating systems are up to date and secure
- ✓ Ensure that the applications installed on devices are those permitted within the organization
- ✓ Ensure that all resources are configured within the organization's domain
- ✓ Ensure that users log in to computers using domain accounts rather than local accounts
- ✓ Providing remote support to users, among other things

SOLUÇÃO

To address these challenges, DSSI deployed and implemented ManageEngine's Endpoint Central solution for endpoints.

Endpoint Central was deployed in failover mode and successfully implemented.

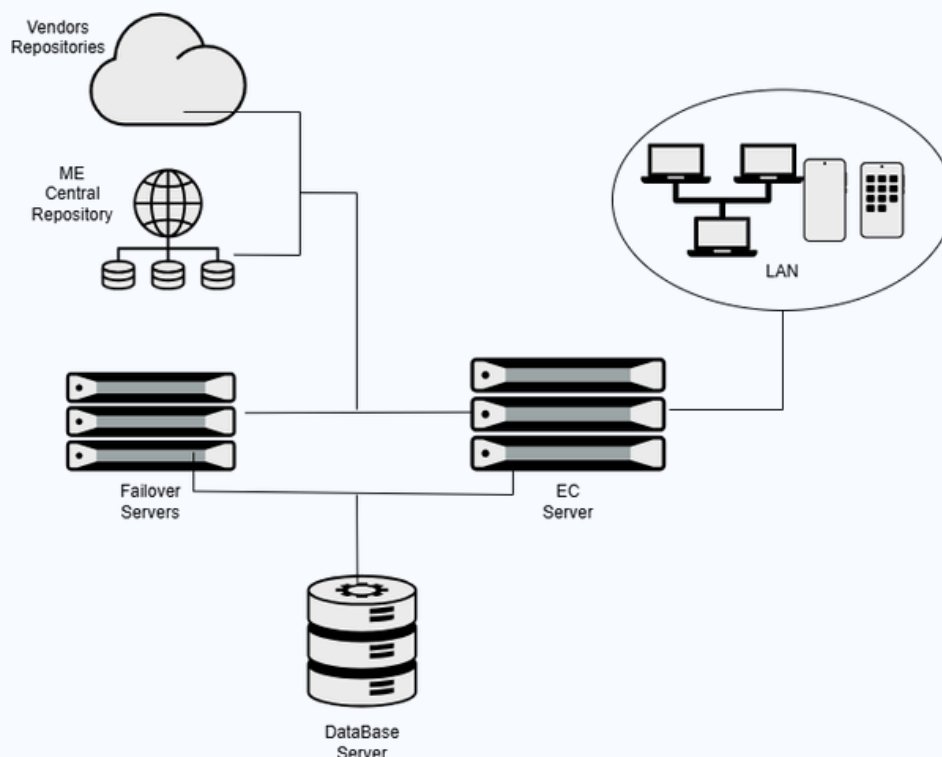

Next, agents were deployed en masse to the various endpoints from the organization's domain.
